

## SuperSACH

SuperSACH is made with a Solid-Ankle-Cushioned-Heel (SACH) design, with an economical design, integral moulded pyramid, plastic integral keel with adjustable heel stiffness. It is suitable for K2/K3 users who require a tough, simple solution.

### Clinical Outcomes using SACH feet

#### With respect to **SAFETY**

- Low stiffness at weight acceptance leads to early foot-flat and greater stability for lower mobility patients<sup>1</sup>

#### With respect to **MOBILITY**

- Satisfactory for patients with limited mobility in order to maintain mobility level<sup>2</sup>
- Lightweight keel increases ease of use and is ideal for elderly users or those with limited strength<sup>2</sup>
- Durability tests confirm foot to be long-lasting for those with low mobility levels<sup>3</sup>

#### With respect to **USER SATISFACTION**

- 54% satisfaction rate<sup>2</sup>
- Satisfaction rates increase within the bilateral population<sup>2</sup>
